

New Vacuum Furnace Service Facility

Following the recent acquisition of Mormet (Fabrications) Limited, Almor has appointed Jez Higham as Site Manager.

Jez has many years experience working in the thermal processing industry, including a considerable time in the vacuum sales and service sector (Ipsen, Abar, Consarc, VFE and VAS). The Almor vacuum furnaces service facility will be located at the Mormet site in Tipton and Jez will also act as the Vacuum Sales and Service Engineer. Jez will work along side Steve Cannon (Sales and Service Manager) and our three vacuum service engineers to offer a comprehensive spares and maintenance service.

A major feature of the Almor vacuum facility is to provide competitively priced hot-zone relines and repairs. A comprehensive stock of hot-zone materials is on hand to enable emergency repairs to be dealt with promptly. Hot-zone outer cages/cases are manufactured at Mormet prior to relining, giving us full control of the manufacturing process. Almor also offer a design service to improve the life and performance of the hot-zone.

To develop the relationship between ourselves and the customer we are offering a 'free of charge' furnace survey, including a leak test and checks on the furnace operation, safety interlocks and hot-zone condition. A full service sheet will be issued to the customer following the visit. A copy of the actual tasks carried out during a full service of a vacuum furnace is available should it be required.

For all your vacuum furnace, spares, service requirements or advice please contact either Jez Higham on 0121 522 2522 or Steve Cannon on 0115 986 8773.
